Cookie Policy

1. What are cookies?

A "cookie" is a piece of information, like a tag, which some websites create on your PC/mobile phone which identifies your PC/mobile phone whenever you visit that website. In order to provide you with the best possible online experience, CMLink may create cookies when you visit www.cmlink.com , whether this is on your mobile or your PC. Cookies help us to arrange content to match your preferred interests, and take into account your CMLink customizations. They're also used by most major websites. You may also find that some third party sites use cookies – sites such as YouTube – when you view an embedded video, or Social Networks such as Facebook and Twitter.

2. How we use cookies?

We collect and use cookies for reasons such as data analysis or security purposes.

• Data analysis purpose: We collect and analyze cookies to further improve our software experience;

• Security purpose: We will use cookies to limit certain types of cyber security attacks.

3. How do you manage your cookies?

You can accept or decline cookies. Most PCs automatically accept them but you can modify your browser settings to decline them if you wish. Each browser is different, so check the 'Help' menu of your browser (or your mobile phone's manual) to learn how to change your cookie preferences.

If you decline cookies, some functions of CMLink site may not be available to their full extent in this case and you may not be able to access areas you want on the website. For this reason we recommend that you accept cookies.
